

Jamie Thomas

IBM General Manager, Systems
Strategy and Development

About Me

Responsible for strategy, development and client experience – IBM Power, Mainframe, Storage and Quantum offerings

Also own IBM's worldwide supply chain and manufacturing operations

Prior roles in Storage, Tivoli (Systems Management and Internet of Things), Rational development tools and WebSphere

University of Tennessee – Knoxville
Computer Science Alumni

Is Quantum Computing important?

Quantum potential drives dynamic business landscape

Increasing complex simulation could increase the rate of drug discovery by 5% to 10% and accelerate development times by 15% to 20%.

Quantum computing will not replace classical computing, but the market could be more than \$50 billion by 2030

European Quantum Technology Flagship will provide €1 billion of funding for quantum research over the next ten years, funding 20 projects from 21 countries

US Government National Quantum Initiative \$1.3B through 2023

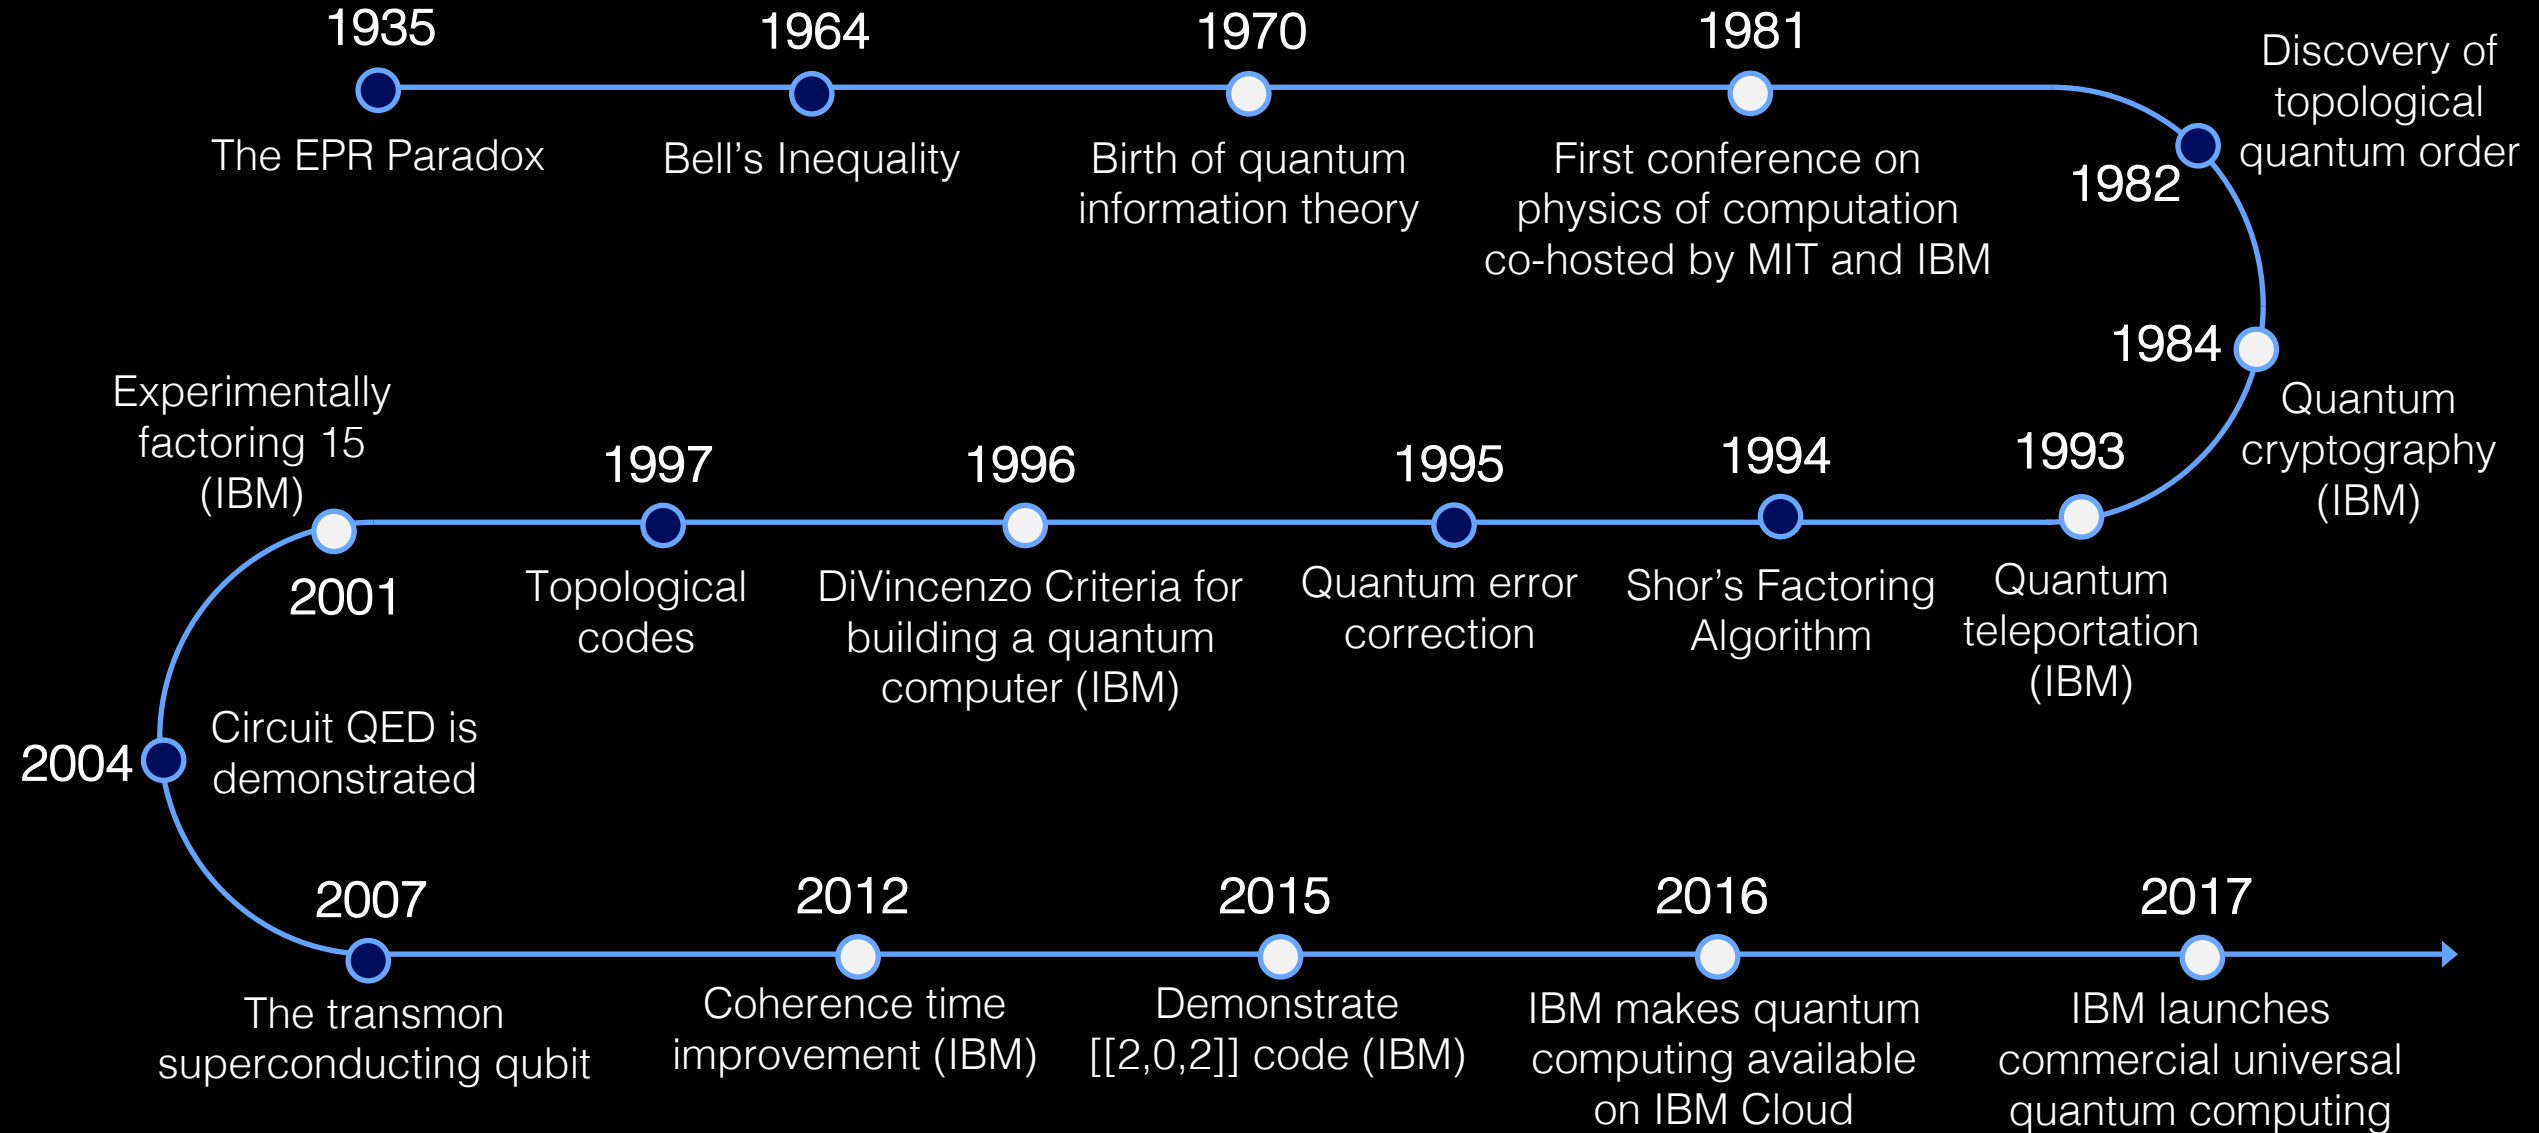

Leading Industries for Quantum Computing Adoption will include Life Sciences, Financial Services, Aerospace, Oil, Gas, and Mining, Agriculture, and Automotive

In May of 1981, IBM and MIT hosted the Physics of Computation Conference

A history of quantum computing

Our intuition about
what we can compute
is wrong

It is impossible to model caffeine on today's most powerful super computers, but we could represent it using 160 quantum bits, or qubits.

A new model of computation that **changes the game**

Building **Quantum Applications** is about working out how to use these two principles in **a new model of computation**

1). A physical system in a perfectly definite state can still behave randomly.

2). Two systems that are too far apart to influence each other can nevertheless behave in ways that, though individually random, are somehow strongly correlated.

Classical computers aren't going away...

Modern Infrastructure for Big Data & AI

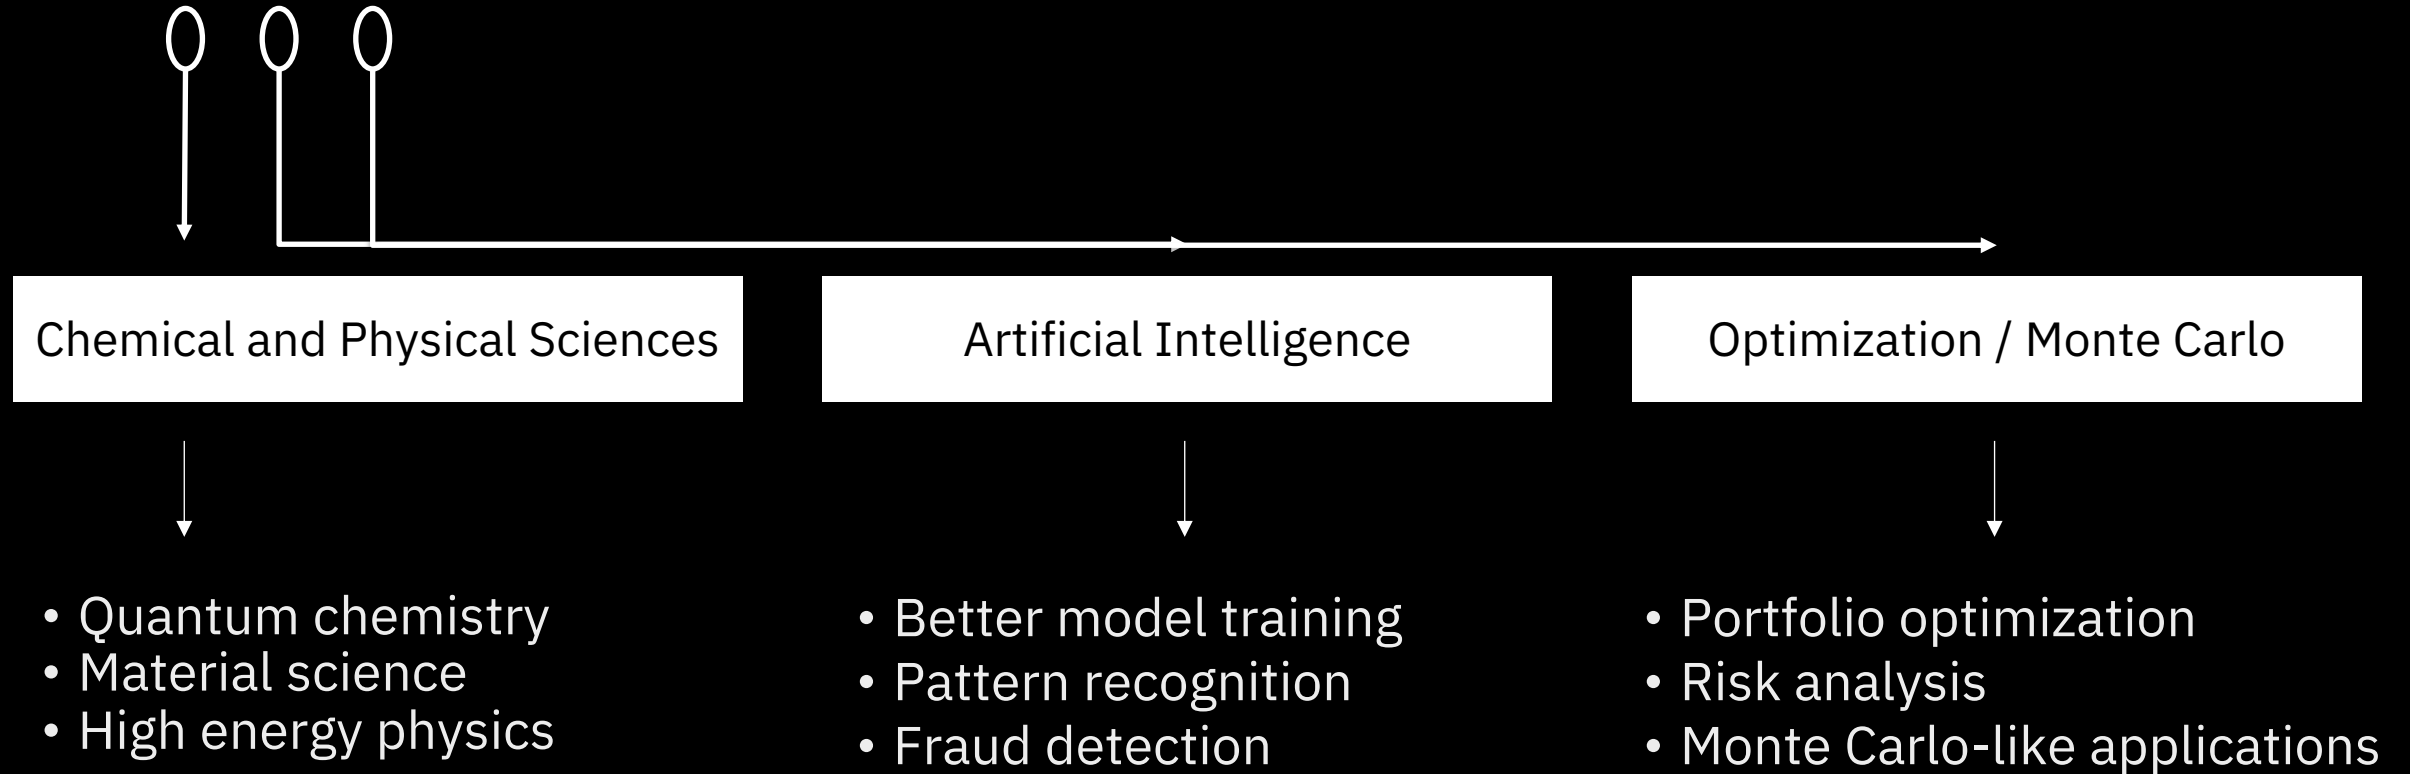

Store, manage and process huge quantities of data to extract insights and take business action.

Quantum Computers

Explore large set of possibilities and identify optimal answer to drive business value.

Research towards the first use cases with quantum advantage...

Commercializing
Quantum Computing
via IBM Q

IBM Q quantum computing systems

Microwave electronics

Refrigerator to cool qubits to 10 - 15 mK with a mixture of ^3He and ^4He

Chip with superconducting qubits and resonators

PCB with the qubit chip at 15 mK
Protected from the environment by multiple shields

IBM released the IBM Q Experience in 2016

Quantum computer at IBM Research

IBM quantum bit device

IBM Quantum Experience

In May 2016, IBM made a [quantum computing platform available via the IBM Cloud](#), giving students, scientists and enthusiasts hands-on access to run algorithms and experiments

The IBM Q Experience has seen extraordinary adoption

- First quantum computer on the cloud
- > 100,000 users
- All 7 continents
- > 6 **Million** experiments run
- > 120 papers
- > 1500 colleges and universities, 300 high schools, 300 private institutions

Programming with Qiskit Aqua

The world's first and only end-to-end programming framework for quantum computers

- Interface existing classical applications
- No new programming languages to learn
- Open source
- Modular and extensible

Intelligence

Optimization

Built on a library of quantum algorithms

Qiskit Terra

Build, run and compile
quantum circuits

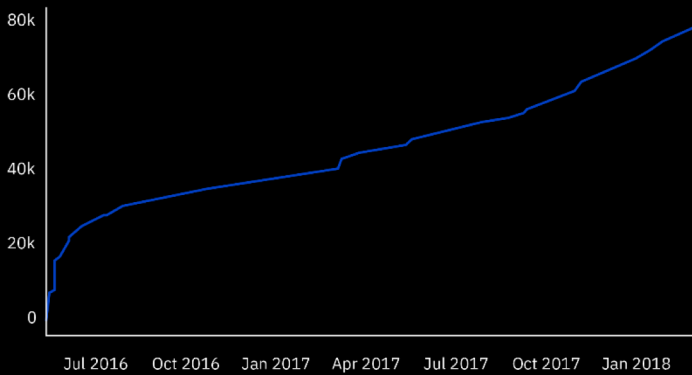

IBM Q Devices

Run on real
quantum systems

IBM Q is the largest and fastest growing *Quantum Community*

IBM Q Experience

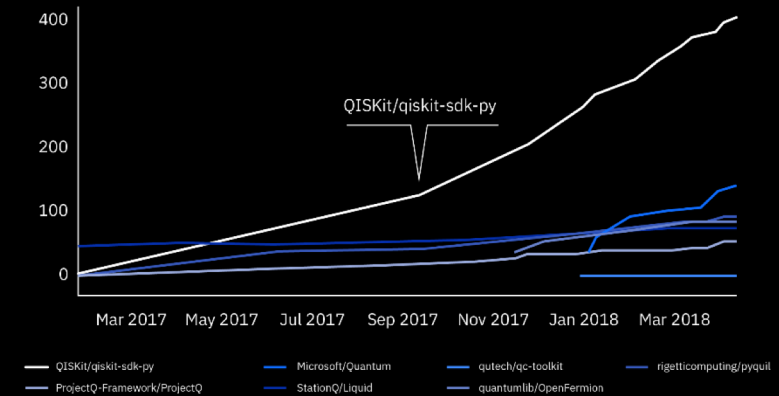

Number of users

- Open to public for research and education
- Access via IBM Cloud

QISKit.org

Github forks

Software kit for short depth quantum circuits and building near term applications and experiments on quantum computers.

IBM announced in early 2017 that we were building the first universal quantum computers for business and science

The IBM Q Network

In December, 2017, IBM launched the IBM Q Network, a collaboration with leading Fortune 500 companies and research institutions with a shared mission to ...

Accelerate Research

Collaborate with the most advanced academic and research organizations to advance quantum computing technology.

Launch Commercial Applications

Engage industry leaders to combine IBM's quantum computing expertise with industry specific expertise to accelerate development of the first commercial use cases.

Educate and Prepare

Expand and train the ecosystem of users, developers, and application specialists that will be essential to the adoption and scaling of quantum computing.

Recent IBM Q Network news: New hub at North Carolina State

IBM Announces Collaboration with North Carolina State University to Accelerate Quantum Computing

NC State to join the IBM Q Network as first university-based IBM Q Hub in North America

YORKTOWN HEIGHTS, N.Y., May 10, 2018 /PRNewswire/ -- IBM (NYSE: [IBM](#)) today announced that North Carolina State University (NC State) will join the [IBM Q Network](#)™ as the first university-based IBM Q Hub in North America. The university will work directly with IBM to advance quantum computing and industry collaborations, as part of the IBM Q Network's growing quantum computing ecosystem.

IBM Q Network-wide resources and collaboration

Technical support for system use

Educational content and resources

Advisory council of representatives from each organization

Industry and academic workshops

Opportunities to share individual ideas and innovations across Network

Opportunities for researcher exchange and collaboration across network

Your next steps to getting Quantum Ready
